PROFILE SUMMARY

Dedicated Software Engineering Undergraduate with a strong foundation in Java and a passion for developing scalable software solutions. I am highly skilled in both Frontend and Backend development, with experience in building responsive user interfaces and robust server-side applications. I am a quick learner with a keen interest in mastering new technologies and contributing to innovative projects within the tech industry.

My goal is to leverage my technical skills to build efficient software while continuously growing as a professional software engineer.

CORE COMPETENCIES

- **Languages:** Java, Python, JavaScript, TypeScript, SQL, HTML5, CSS3
- **Frontend:** React.js, React Native, Expo, Tailwind CSS, Bootstrap, Responsive Web Design
- **Backend:** Node.js, Express.js, Spring Boot, REST APIs, Microservices, WebSockets, Server-Side Development
- **Databases:** MySQL, MongoDB
- **AI & Machine Learning:** OpenAI API, Google Generative AI, Pandas, NumPy
- **Tools & Security:** Git, GitHub, Docker, JWT, OAuth2, Spring Security
- **Methodologies & Soft Skills:** OOP, Data Structures & Algorithms, Problem Solving, Technical Documentation

EDUCATION

GRADUATE DIPLOMA IN SOFTWARE ENGINEERING (GDSE)
Feb 2024 - Present

Institute of Software Engineering (IJSE)

- Following a comprehensive 2-year program covering the full software development lifecycle.
- Gaining hands-on experience in **Object-Oriented Programming (Java)**, **Data Structures**, and **Database Management Systems (SQL)**.
- Developing expertise in modern web technologies, design patterns, and advanced software engineering principles to build scalable applications.

ADVANCED LEVEL (A/L)
2020 - 2022

Royal College Horana

- **Stream:** Commerce (ICT, Accounting, Econ)
- **Result:** 2S

PROFESSIONAL EXPERIENCE

Job Finder SYSTEM Oct 2025
Individual Project

- Developed a full-stack web application using **Spring Boot** and **Java** to streamline job searching and management processes.
- Integrated **Google Maps API** for precise **Location Marking** and **Real-time Visualization**.
- Utilized **MySQL** and followed a structured backend architecture with **Controller, Service, and Repository** layers (MVC pattern).
- Designed and tested secure RESTful APIs to ensure efficient data handling.

Movie Recommendation SYSTEM Dec 2025
Individual Project

- Engineered a recommendation system using the **MERN Stack (MongoDB, Express.js, React, Node.js)**.
- Developed an **AI-powered recommendation feature** to provide personalized movie suggestions based on user preferences.
- Implemented secure RESTful APIs and ensured proper authentication and data validation.
- Designed a dynamic, fully responsive user interface (UI) for enhanced user experience.
- Optimized performance and database queries for efficient data retrieval.

Note-taking MOBILE APPLICATION Feb 2026
Individual Project

- Designed and developed a mobile application using Firebase for real-time database management and authentication.
- Integrated Cloudinary for cloud-based media storage and management.
- Implemented user authentication, CRUD operations, and real-time synchronization.
- Successfully built and deployed a standalone mobile application with a clean and intuitive UI.

PERSONAL PORTFOLIO WEBSITE May 2025
Individual Project

- Developed a professional portfolio using **HTML5, CSS3, and JavaScript** to showcase skills.
- Implemented **Responsive Web Design** for compatibility across all devices.
